A Visionary in the 2021 Gartner Magic Quadrant for Network Firewalls

Hillstone Networks creates the trusted workplace of the future, protecting over 20,000 customers globally, including the networks of Fortune 500 companies across financial and educational institutions, service providers, and data centers, in over 50 countries. Through break-through innovation, Hillstone Networks has evolved from a strong network firewall company, into Infrastructure Protection platform with multilayered defense.

Today, every enterprise exists in a post-breach world. Across size, industry, deployment model – all enterprises face the same challenges of hardening their border-

less networks, protecting their distributed workforce, and securing their critical assets and confidential data. In addition, they must be armed to quickly mitigate any damage in the case of an imminent breach event.

Hillstone helps enterprises address all these challenges with solutions that deliver the visibility and intelligence to comprehensively **see**, thoroughly **understand**, and rapidly **act** against today's multilayer, multistage cyberthreats.

From edge to cloud, Hillstone delivers protection with lower total-cost-of-ownership. With a reputation for “security that

works,” Hillstone’s holistic product suite includes NGFW, NDR/XDR, SD-WAN, ZTNA as well as virtual machine and multi-cloud security. Hillstone’s cutting-edge solutions leverage AI/ML and integrate seamlessly into SecOps frameworks, providing assurance to CISOs that their enterprises are well-protected.

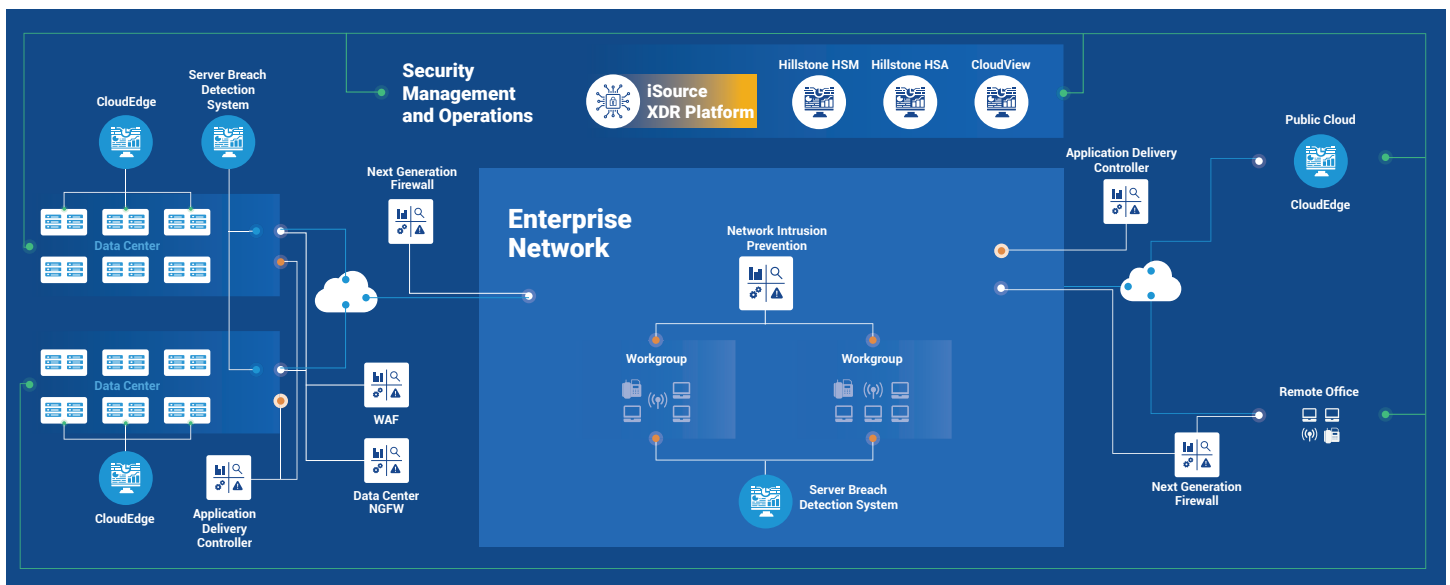

Hillstone has more than 1800 employees globally, and three Research and Design centers located across Silicon Valley, US, Beijing and Suzhou, China.

See: Comprehensive Visibility from Edge to Cloud, from User to Application

Understand: Advanced Threat Intelligence and Analytics to Grasp Cybersecurity Posture

Act: Distributed and Layered Defense to Protect from Multilayer, Multistage Cyber Attacks

Enterprise Infrastructure Protection Platform

Hillstone Key Technology Initiatives

AI-powered NDR and XDR

- Machine learning techniques to detect suspicious traffic or malware
- Incident detection, response, orchestration, automation and TI

AI-Powered Breach Detections

AI-Driven Security Operation

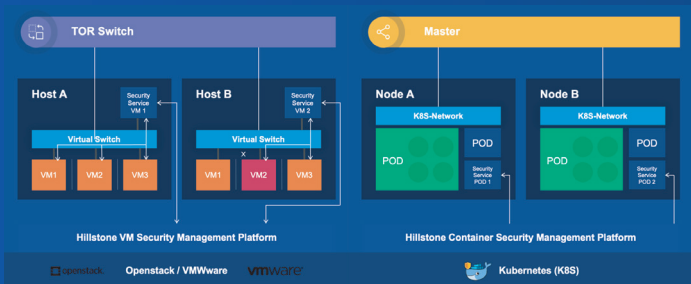

Micro-segmentation and NFV

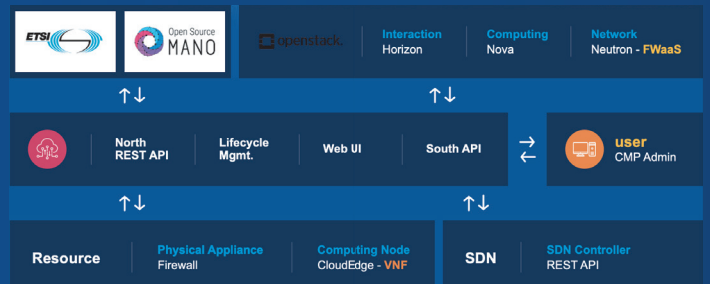

- Seamless integration with major cloud and virtualization platforms
- Comprehensive visibility and protection for cloud workloads

Micro-segmentation Solution for the Cloud

Network Element Management Solution for NFV

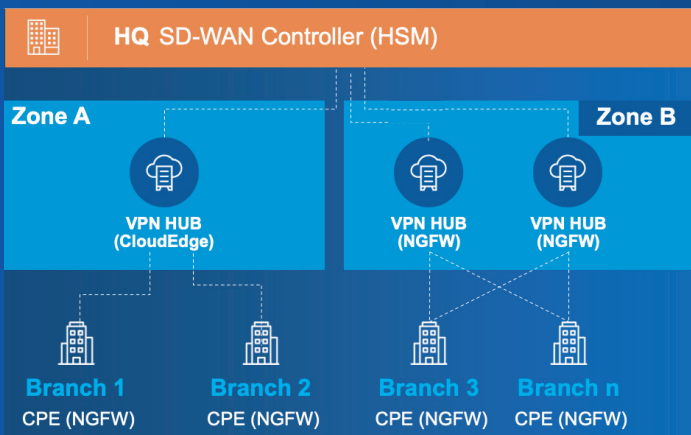

Secure SD-WAN and ZTNA

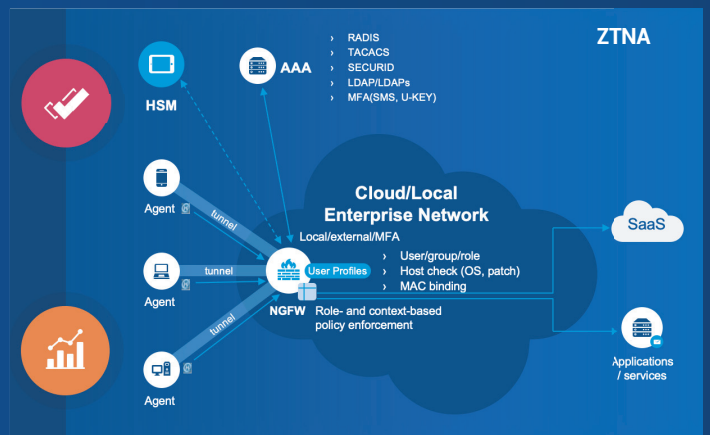

- Built on award-winning enterprise security foundations
- Distributed enterprise/remote workforce/work from anywhere

Secure SD-WAN for Distributed Enterprises

ZTNA: A Journey to the Trusted Network
